

# IVP

## Investment Planning Solution

Complexity of large, geographically distributed businesses has reached the point where it is no longer possible to manage immense number of world-wide dispersed investment projects in the haphazard ways of the past. Badly executed projects are costly in terms of money, efficiency and employee morale. Investment decision makers are struggling to find unbiased methods for evaluating initiatives and proposals. Inconsistent information and non-uniform proposal practices make picking critical projects that deliver the most value a difficult exercise. Luckily, the technology became mature enough to enable development of supportive tools that aid decision makers in selecting the right things to do, and help them deliver investment project portfolios efficiently and flawlessly. Investment planning solution IVP helps executives deliver their programs on-time, on-budget and on-target!

### Investment Planning Solution

IVP couples centralized, top-down decision-making with distributed, bottom-up planning and management of projects. It gives investment decision makers a comprehensive overview of their organization's investments, initiatives and resources, and empowers managers to deliver controlled and predictable execution of projects and programs. IVP ensures that optimal plans are generated, communication barriers are removed and projects are performed with accuracy.

Our solution supports collection and sharing of crucial information to enable the most efficient use of the available resources without duplication of effort/waste. Strong collaboration features improve communication for better project planning and easier coordination. Administrative overhead is diminished by automatization of routine tasks.

### Benefits

- **Improved management capabilities**, support for enterprise program and project planning, estimating, budgeting, tracking, and resource allocation
- Solution that **covers a complete investment project life cycle**: from the collection of the ideas, through project proposing, budget calculation, proposal approval or rejection, project performance monitoring, to benefit realization
- **Increased reliability of budget planning** through a clear overview of all projects and project related data, and support for risk and benefit analysis
- **Improved, uniform and consistent planning process** within the whole enterprise, allowing for objective comparison of projects and better collaboration
- **Increased business responsiveness**, collaboration, improved quality of teamwork, and lower process costs
- Flexible solution, **easily customized** to mirror perfectly the complexity of your organization
