

My name is Javier Vázquez, I am a student at the Polytechnic University of Madrid and I study telecommunications engineering. I worked at the Mihajlo Pupin Institute during the summer of 2017, during those months I have had an incredible professional and personal experience.

I worked in the Department of Telecommunications, in the department I met Valentina Timcenko and Lazar Berbakov, they were the first people I met inside the IMP, they made the days inside the IMP very comfortable and working there was much easier and whenever I had some doubt about the project I was doing I could go to them to help me solve it.

During my stay in Serbia, I met many students who, like me, worked at IMP and I was fortunate to work together with Franco and Alberto in the same project. Apart from the professional experience I gained during my stay at IMP, I was also able to travel and get to know much of the countries that surround Serbia.

On the other hand in the institute we never had any problem even we had at our disposal food and drink, we were taken care of at all times. As you can see this summer has been incredible since I have met very good people and I have become very good friends. I wish I could come back at some point in my life and wish I could have stayed longer.

I can only thank them for everything they have done for me, Javier.
